

## Business Case: Migration to S/4HANA with transfer of existing processes and data (Brown Field).

The data volume to be migrated is drastically reduced by archiving. For this reason, application data should be archived as extensively as possible in a compliant way for an efficient migration to S/4HANA.

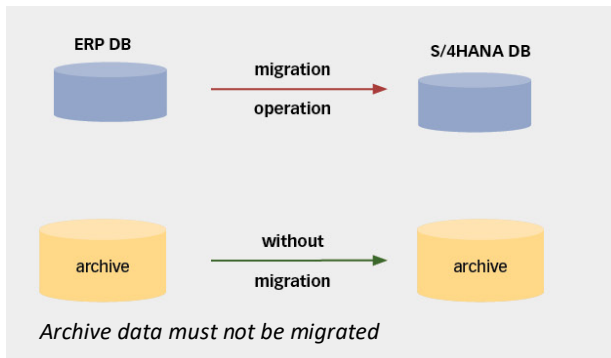

The access to archived data should be possible unrestricted in the new S/4HANA.

Solution	Your advantage
<p><b>Access to archived data without restrictions</b></p>	<p><b>Fast and uncomplicated project implementation, cost-saving and future-proof</b></p>

- Completely analog to the SAP standard transactions and reports
- Addition to the SAP standard archiving by seamless data access down to document level
- Modular solution, available for all essential SAP modules
- No difference for user whether the data is provided from the original database or the archive
- GoBD/GDPR compliant data extraction for company audits and tax audits

- Archived data does not need to be migrated to S/4HANA
- Simultaneous or separate display of online and archive data that can be selected by parameters
- No difference for user whether the data is provided from the original database or the archive
- Fast implementation without user training
- Seamless integration to the SAP authorization concept and the SAP recommendation for GDPR conformity
- Free-of-charge quick check of SAP database, test versions, proof of concept
- Inexpensive PBS license model
- Go live within days, reduced project runtime
- Available for ERP and S/4HANA, SAP certified
- Can be enhanced to analysis functionality and archive data access via Fiori apps

For more than 30 years, more than 1,700 well-known customers worldwide rely on our SAP add-on solutions. These solutions aim at making full advantage of data archiving to increase substantially the SAP system performance, reduce databases, or decommission systems at low cost. At the same time, we provide an integrated access to online, archive, and external data to meet all requirements for GDPR (General Data Protection Regulation) and GoBD (German legal accounting standards).
